*Bag Filtration System in industry*

## PRODUCT DETAILS:

At present, about 35 cement industries, 402 auto and semi-auto rice mills, and 280 auto and semi-auto flour mills are using dust collectors for the product filtration process. These filter bags need to clean after a certain period of time by applying a pulse jet. The entire process is done by a PLC device. These bag filters are the heart of these industries.

Whenever a controller fails you need to hire a PLC expert and factory production is stopped completely until he comes and the troubleshooting process is completed. Sometimes it requires 10 to 15 days to solve and each day more than 3 Lac taka production loss occurs. To solve this issue, we have designed a **5D Dust Collector Controller System** which ensures easy installation and programmable by any technician. Moreover, it provides the same stability as any PLC Device.

*5D Dust Collector Controller System*

## FEATURES OF PRODUCT

- ❖ *Low Cost: 10,000 BDT*
- ❖ *Easy Installation: No PLC Expert Required*
- ❖ *QoS & Longevity: 24 hrs Non-stop Service*
- ❖ *Easy Export Quality: Compact Size*
- ❖ *Lower Transportation Time:*  
*Currier/ Hand to Hand Transportation*
- ❖ *Lower Transportation Cost: Max 200 BDT*
- ❖ *Warranty Service: 1 Year*
